• ACCELERATOR CONVERSATIONS

Adaptive AI agents *that help you* thrive on the go.

9 autonomous agents in production + AILA blueprint. 13 months. One developer. Under \$15,000. All running 24/7 on shared infrastructure.

Built to prove I can ship. **Primary goal: join the right team as a founding AI / applied-AI engineer.** Investment is welcome — stable income is the mission.

9+1

AGENTS IN PRODUCTION · 1 BLUEPRINT (AILA)

13mo

SOLO BUILD TIME

<\$15K

TOTAL CAPITAL INVESTED

~\$0

MONTHLY INFRA COST

Most people can't afford the tools that **high-performing** businesses run on.

Especially when you are adapting to a new country, a new language, or a new career — without a team, a budget, or a safety net.

01 / ADAPTATION

Language & cultural shift

280M+ people navigating daily life in a second language with no affordable, always-on support.

02 / CAREER

Navigation is broken

Job hunting rewards templates, not signal. ATS forms, ghosting, zero feedback loops — especially for non-traditional profiles.

03 / BUILDING

Solo builders, no team

Founders and small teams can't afford the engineering bandwidth that their ideas actually require.

An ecosystem of *autonomous* agents, each owning a real **problem** end-to-end.

Not a platform. Not a wrapper. Each agent is a production system: scraping, scoring, deciding, acting, notifying — 24/7, without human input.

INFRASTRUCTURE

One VM. One database. 9 agents + blueprint.

All agents share one Oracle Cloud VM and one Oracle Autonomous Database. Coordinate through shared tables. ~\$0/month on Oracle free credit grant.

MODEL ROUTING

Cost-conscious by design

Claude Opus 4 for critical paths. Groq Llama 3.3 70B (free tier) for standard analysis. Explicit cost reasoning per call.

VOICE-FIRST

Voice interfaces on every agent

Groq Whisper transcription. Accessible via WhatsApp and Telegram — no app install required. Sub-2s latency on EspaLuz.

EVALUATION

Production-grade eval harness

131-test, 4-layer pipeline. LLM-as-judge consistency scoring. \$0.03/run. Regressions caught before deploy.

9 agents in production. 1 blueprint.

Every agent below runs 24/7 on Oracle Cloud, coordinating through shared database tables. Verifiable via `pm2 list` + `systemctl is-active`. Real users. Real deploys. AILA is the next-layer architecture blueprint, not yet deployed.

AGENT	FUNCTION	PLATFORM	STATUS
EspaLuz WhatsApp	Bilingual tutor, voice-first, 50+ emotion detection	WhatsApp	● LIVE <20 paying
EspaLuz Telegram	Bilingual tutor, structured lessons	Telegram	● LIVE
EspaLuz Influencer	Automated social content EN/ES	Telegram	● EARLY
CTO AIPA	GitHub webhook → diff → LLM review → comment	Telegram + API	● LIVE 25 reviews
CMO AIPA	GEO+SEO, daily blog, UTM, lead triage	FastAPI + Telegram	● LIVE 5 phases
VibeJob Hunter	Autonomous job search, scoring, ATS automation	Telegram	● VERIFYING
OpenClaw Shortlist	YC AI company shortlist, voice interface	Telegram	● LIVE
Algom Alpha / DragonTrade	Crypto research + auto-posting	X (Twitter)	● FRAGILE
Atuona Creative AI	NFT generation, automated image + video	Polygon + Telegram	● LIVE 48+ NFTs
AILA	Adaptive Intelligent Life Assistant — orchestrates all 9 agents, longitudinal personal memory	Hive / Oracle	● BLUEPRINT

EspaLuz — *bilingual tutor*, voice-first, emotion-aware.

EspaLuz AI Tutor

Spanish ↔ English · family-aware context · WhatsApp + Telegram + Web

● LIVE

● <20 PAYING

RETAINED SINCE 2025

CORE FEATURES

- ▶ **50+ emotion detection** — cultural shock, language anxiety, homesickness
- ▶ **Voice processing** — sub-2 second latency via Groq Whisper
- ▶ **OCR image translation** — extract text from photos, translate inline
- ▶ **Multi-platform** — WhatsApp Cloud API + Telegram + Web, one core engine
- ▶ **PayPal subscriptions** integrated (payment sync is current fix priority)

HONEST SIGNAL

Fewer than 20 paying subscribers — but they have been retained since 2025 with **zero marketing spend**. People paid, stayed, kept using it. That is the retention signal worth scaling.

CTO AIPA — *code review pipeline*, multi-model, cost-routed.

CTO AIPA

GitHub webhook → diff fetch → deterministic analysis → LLM routing → GitHub comment + Oracle write

● LIVE

● 25 REVIEWS

3 REPOS

PIPELINE

- 01 Webhook trigger — any push to monitored repo
- 02 Diff + security scan — deterministic complexity + CVE detection
- 03 LLM routing — Claude Opus 4 (critical) or Groq Llama 3.3 70B (standard, free)
- 04 Posted comment + Oracle DB write for audit trail
- 05 Telegram notification to founder — every review, every repo

WHY IT MATTERS

Multi-model routing with **explicit cost reasoning** — not the default behavior of LLM apps. Claude for depth, Groq for volume. One pipeline, two budgets.

VibeJob Hunter — *production eval* harness, 4 layers, \$0.03/run.

VibeJob Hunter

Autonomous scrape → score → route → apply → follow-up — 218 ATS endpoints monitored

● DELIVERY VERIFYING

● 131 TESTS

EVAL HARNESS — 4 LAYERS

- L1 **Keyword scoring** — deterministic, <1s
 - L2 **Bias compensation** — penalty layers for wrong role, wrong stack, US-only
 - L3 **Golden-set routing** — 22 human-labelled jobs as ground truth
 - L4 **LLM-as-judge** — Claude Haiku validates agreement ≥75% threshold
- **Cost** — \$0.03/run. Catches regressions before deploy.

PIPELINE — LANGGRAPH (LIVE APR 2026)

7-node StateGraph: gate → score → route → submit/outreach/discard → notify. SQLite checkpointer per job_id eliminates duplicate processing. Human-approval interrupt for score 60–69. Real HTTP status + confirmation_id capture on every ATS submission. First Oracle cycle: 8 jobs, all correctly discarded, zero errors.

CMO AIPA — *autonomous* marketing engine, 5 phases.

CMO AIPA — GEO + SEO Engine

Runs autonomously on Oracle. Daily content. Attribution. Lead triage. No human in the loop.

● LIVE

● 5 PHASES

PHASE 01

Structured data

JSON-LD schema, OpenGraph, hreflang EN/ES, build-time sitemap with live Hashnode slugs.

PHASE 02

Daily blog publisher

GSC gap analysis selects topics. AI writes. Cross-posts to Dev.to. Hashnode primary.

PHASE 03

UTM attribution

Every CTA tagged. Full-funnel tracking to Oracle. Source, medium, campaign in DB.

PHASE 04

AI lead triage

Incoming leads scored by urgency. Dashboard for founder review. Auto-reply.

PHASE 05

Cloudflare + redirects

301 hygiene, apex canonical, 404 noindex. Search discoverability not an afterthought.

PHASE 06

Roadmapped

WordPress-compatible blueprint for client deployments (fractional pitch asset).

Claude itself *uses Bright Data* — autonomously, in production.

The same `cto-aipa` Node process that runs the 9-agent ecosystem now exposes 4 Bright Data products to an autonomous Claude tool-use loop. The agent decides what to search, which pages to scrape, and when to stop. Built on top of an existing production system, not a tutorial demo.

4 PRODUCTS · ONE SHARED TOKEN

01 Web Unlocker → `bdFetch()`

Auto-enriches every HubSpot deal with founder, tech stack, funding.
Powers VibeJob Hunter LinkedIn Jobs (120/cycle).

02 SERP API → `bdSerpSearch()` via WU proxy + `brd_json=1`

Replaced paid SerpAPI. One credential set, lower cost, same JSON shape.

03 Scraping Browser → `bdScrapingBrowserFetch()` + `bdSmartFetch()` orchestrator

Try Web Unlocker first → escalate to Scraping Browser only when JS-gated or thin. Cost-aware by design.

04 MCP Server → `.mcp.json` · `@brightdata/mcp`

Bright Data exposed directly to Claude Code IDE for in-editor live web research.

AUTONOMOUS CLAUDE LOOP · LIVE PROOF

`/research_company decircle.io`

86_s

END-TO-END

7BD CALLS (CLAUDE
CHOSE)**3**

TOOLS · 1 LOOP

SENDABLE PITCH ANGLE — OUTPUT TO TELEGRAM

"Saw you're hiring a Head of BD to build Midas's distribution engine — would a 2-week AI marketing sprint make sense?"

3 TELEGRAM COMMANDS · `/MENU BUSINESS WIRING`

`/research_company` → CLIENT pitch + HOT/WARM/COLD verdict`/research_employer` → HIRING intel + application angle`/research_competitor` → SEO/AEO blog topic gaps

HONEST SCOPE: The 9-agent production system and the Web Unlocker integration existed before the hackathon. Hackathon-week net-new: 3 more Bright Data products integrated under one shared credential set, the autonomous Claude tool-use loop in `SRC/RESEARCH-AGENT.TS`, and the 3 operator-facing Telegram commands. Shipped, tested, verified live within hackathon week.

One developer shipping what most teams can't.

Claude Code and Cursor are the actual development environment — not a shortcut, not training wheels. The permanent workflow.

VELOCITY

Idea → deployed agent in days

Every agent was scoped, built, and shipped to production by one person. 9 systems shipped + AILA blueprint in 13 months is the proof.

OWNERSHIP

Full architectural control

No black boxes. No delegated understanding. Every line is reviewed, every trade-off is deliberate.

PRODUCTION-FIRST

Iterating with real users

Not in staging. Not in demos. Real WhatsApp subscribers, real GitHub webhooks, real ATS submissions.

COST DISCIPLINE

Free-tier + Oracle Always Free

Multi-model routing. Free-tier APIs where quality allows. ~\$0/month operating cost during credit grant.

2026 REALITY: This is what a founding AI hire looks like. Not someone who codes from scratch without assistance — someone who leverages AI tools to out-execute teams.

The numbers *as they are.*

SPANISH-SPEAKING COUNTRIES ESPALUZ REACHES

HONEST NOTE: Revenue is effectively zero at scale. VibeJob Hunter delivery verification is the current open problem. These are the real numbers - the story is strong enough without inflation.

Elena Revicheva

executive who ships.

- 2011-2018 Chief Legal Officer → Deputy CEO for Corporate Governance — Russian regional e-government digital infrastructure. 7 years board-level governance, enterprise digital transformation, highly regulated environments. Decided what got built and made it accountable.
- 2022 Relocated to Panama City as a single mother with a one-year-old. No local network, no Spanish, no income. Rebuilt from zero.
- Jan 2025 Decision: teach herself to build AI systems using Claude Code and Cursor as the actual methodology — not a shortcut.
- May 2026 9 production AI agents + AILA architecture blueprint. 13 months. Solo. Under \$15,000. TypeScript, Python, SQL. 8+ AI services integrated. 50K+ lines across the ecosystem. **Bright Data Web Data UNLOCKED hackathon submission shipped.**

THE HYBRID IS RARE: Most AI engineers have never operated at board level. Most executives have never shipped production AI systems. Elena can design, build, and explain AI systems to non-technical decision-makers in the same conversation.

On-chain infrastructure *exists*. Not the investment thesis.

Deployed on Polygon during the 2025 build cycle. All contracts verifiable on-chain. Included for completeness — not as the value proposition.

Hiring-ready.

Open to aligned investment.

The work is real. The systems are live. The honest goal is stable income — joining a worthy team first, investment second.

• PRIMARY • FOUNDING AI HIRE

Join the right team

Full-time remote, founding / senior AI or applied-AI engineer. \$3.5K–\$5K+/mo USD. LATAM-friendly hours. Someone who can design, build, and ship AI systems end-to-end — board-level operator + production builder. Rare combination, fully verifiable above.

• SECONDARY • ACCELERATOR / INVESTMENT

Fund the ecosystem

Fix EspaLuz payment tracking. Verify VibeJob Hunter delivery. Hire one engineer. Extend infra runway before Oracle credit grant expires. Small marketing budget to test retention at scale.
